

Project Management

“We Bring People Together to Achieve Success”

As systems initiatives grow increasingly complex, communicating effectively about new implementations is pivotal to keeping stakeholders informed about what is happening in different areas and phases of a project. Timely, accurate and meaningful communication not only keeps stakeholders “in the loop” about the degree and sort of change taking place, it also helps them to embrace the change. But communicating effectively doesn’t just happen — it needs to be planned ahead of time, and treated as an integral part of the project.

Today's government environment is increasingly complex, with continued demand for modernization, greater use of integrated IT systems and the need for public sector organizations to deliver.

The skills, tools and techniques needed to manage an organization are often underestimated, and it has never been so vital for an organization to acquire proper organizational skills to make a program successful.

MMS has an excellent track record in helping organizations to manage complex government programs. We believe that our success comes from combining a deep understanding of the content and context for change, with tried-and-tested program management methodology.

This enables our clients to:

- Define the goals for a program and maximize the benefits it is designed to deliver
- Be confident that all the work necessary to achieve the goals has been identified and planned comprehensively
- Assess whether the program is resourced and governed appropriately
- Measure the success of the program and the benefits projected as it progresses, giving vital early warning of failure.

“A track record of success, covering a wide spectrum of business challenges.”

The world of project and program management is changing more rapidly than ever before and the evidence is all around you. Shorter product cycles, heightened competition, the advent of e-commerce, higher productivity goals and increased government regulations - all of these market forces and a hundred others are creating a high-pressure, rapidly-evolving business environment and an increasing squeeze on budget regulation. While technology is rising as forefront; movement is taking place that extracts human interaction. Ironically, today's projects and project management require more demanding human relations working dynamically together than ever before. Emphasis on human project management relations is crucial – and at MMS we have recognized its increased importance to implement it strongly into our company practice philosophy. We recognize technology is not a replacement for organizational skills, but rather, a magnificent tool to forecast, evaluate data, and improve procedures to intricate tasks.

MMS's methodology is also both pragmatic and scalable, tailored to suit your program. For example, a project whose success requires winning over a diverse group of stakeholders will not require the same approach as a major systems engineering project.

You need:

- A track record of success, covering a wide spectrum of business challenges.
- Experience in project results, with exactly the kind of business and technological issues you face.
- Expertise that applies to your specific industry in all its depth and complexity.
- Impressive resources - a large array of contacts and supporting sources that give you access to information, technology and insight from across the country.
- Commitments to your ROI (Return On Investment) that will make sure the solutions you are offered are not only practical, but also profitable.

Some of the types of Management we perform are:

- Performance Management
- Enterprise Planning
- Reporting and Analysis
- Scope Management
- Earned Value
- Quality Management
- Data Warehousing
- Applications Development
- Systems Analyst
- Risk Management
- PMBOK Knowledge
- Records Management
- Maintenance and Material Management Data Analyst
- Analysis and Control Management
- Human Resources Strategy & Recruitment
- Research and Development services
- Market research and public opinion polling services
- Advertising services/Brand/Product Management
