

“Understanding an individual operations’ workforce and program objectives makes the difference to valued training”

A mix of instructional strategies, such as case studies, lectures, organization on-the-job applications and team-based problem solving bring relevance and reality to the classroom. Courses are exciting, timely, and concise. Video examples, computer-based applications, multimedia and the internet enhance traditional techniques. Our partnership with you will be built on measurable results. We will agree on ways of measuring progress at several levels in the classroom and in the organization. We measure incremental change but look for long-term improvement.

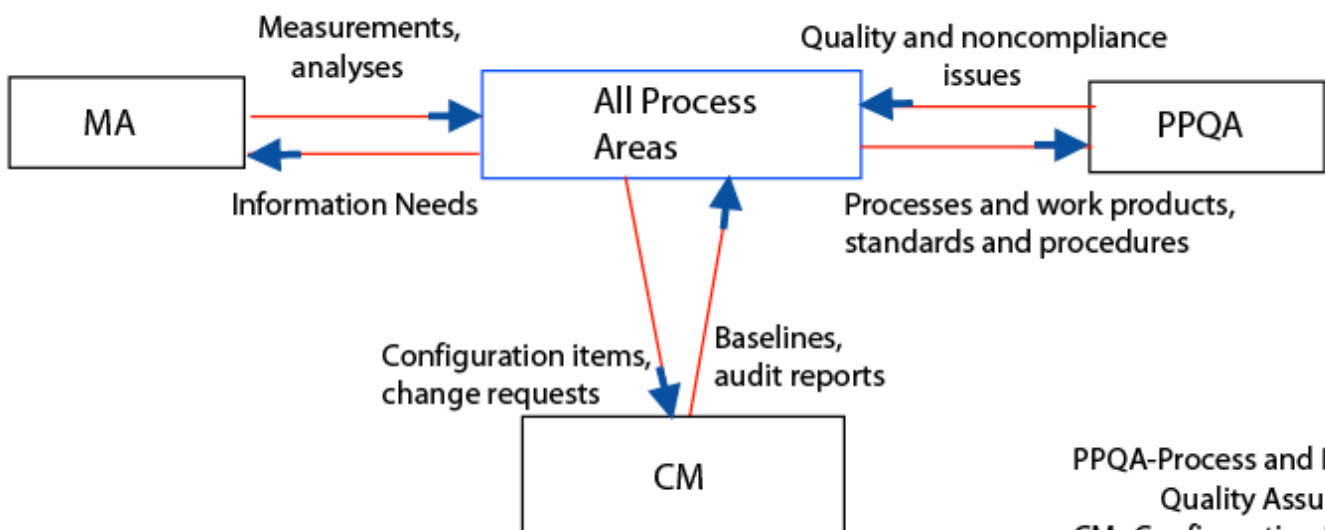

## ACHIEVING SUCCESS THROUGH CUSTOMIZED SOLUTIONS

### Capability Maturity Model Integration (CMMI)

Capability Maturity Model Integration (CMMI) is an approach that addresses product development and maintenance with a focus on processes. CMMI is one of the most innovative and novel concepts in project management, as it helps integrate best practices that cover the product’s life cycle with an emphasis on systems engineering as well as software engineering and the integration necessary to build and maintain the total product.

With technological advances being made everyday, it can be quite cumbersome for certain organizations to attain that certain edge alone. With MMS, however, many companies to maximize their personnel and technology in order to compete in this field. With thorough understandings of systems engineering, software engineering, integrated product and process development, along with supplier sourcing, MMS has proved to its clients that it is on top of the most current issues in this field.

MMS works with its clients in implementing best practices in order to enable them to be able to explicitly link their management and engineering activities to their business objectives. By expanding the scope and visibility of a product life cycle and catering activities to incorporate service, MMS helps its clients meet customer expectations. Moreover, CMMI addresses additional organizational functions critical to a company’s products and services and provides for more communication on a variety of levels between different processes. By implementing high maturity processes, MMS, incorporates other aspects of project management such as risk management, measurement, and supplier management. MMS works very closely with its clients in order to promote growth and success with each of its clients. By catering every project specifically to meet the clients goals, MMS has proved that its support, knowledge and training is unparalleled by others in this field.
